

PARTHI GADHER

Mumbai, India | +91-9422131977 | parthigadher@gmail.com | linkedin.com/in/parthi-gadher-79469a362

SUMMARY

AI and Machine Learning enthusiast pursuing B.Tech in Artificial Intelligence & Data Science. Skilled in Python, FastAPI, LLM integration, and agentic AI systems with hands-on experience building production-grade, real-world AI applications. Proficient in software architecture design, REST API development, and context optimization pipelines. Seeking a software engineering or AI internship role to contribute to large-scale, impactful systems.

EDUCATION

Shah & Anchor Kutchhi Engineering College (SAKEC)

B.Tech in Artificial Intelligence & Data Science

Chembur, Mumbai, India

Aug 2023 – May 2027 (Pursuing)

Holy Cross College

HSC – Science (Physics, Chemistry, Mathematics)

Kalyan West, India

Jun 2021 – May 2023

Holy Cross School

SSC

Kalyan West, India

Feb 2019

TECHNICAL SKILLS

Languages & Frameworks: Python, C, SQL, FastAPI, REST API Design

AI / ML: LLM Integration (Gemini), Prompt Engineering, Provider-Agnostic Architecture, NLP, Agentic AI, Machine Learning

Software Engineering: AST Parsing, Dependency Graph Construction, Context Optimization, Deterministic Pipelines, JSON Schema Validation, Modular System Design

Web & Integration: Frontend Integration (Vite/React), API Integration, CORS Handling, Git, GitHub

Core CS: Data Structures & Algorithms, Software Architecture Design, Intelligent Automation, Predictive Modeling

PROJECTS

PetPal – AI Voice Pet Care Assistant | *Python, FastAPI, NLP, LLM Integration, REST API*

- Designed and developed a voice-based AI assistant for pet health management using NLP-enabled natural language interaction with a provider-agnostic LLM backend.
- Built a FastAPI REST backend with JSON schema validation and deterministic pipelines to handle feeding schedules, vaccination tracking, and health monitoring alerts.
- Implemented multi-turn conversational context retention and modular system architecture for scalable, maintainable pet care workflows.

Modernize Now – Legacy Code Modernization System | *Python, FastAPI, AST Parsing, LLM (Gemini), Vite/React*

- Engineered an AI-powered tool using AST parsing and dependency graph construction to analyze legacy codebases and auto-generate modern Python/Go equivalents with documentation.
- Implemented context optimization pipeline to extract only relevant dependencies, reducing LLM hallucinations; integrated Gemini via a provider-agnostic architecture for flexibility.
- Built full-stack system with FastAPI backend, Vite/React frontend, and CORS handling; applied prompt engineering and JSON schema validation for structured, reliable code output.

Real-Time Emergency Response Triage Assistant | *Python, FastAPI, Agentic AI, NLP, Context Optimization*

- Built a real-time voice and text triage system with intelligent context pruning to process large-scale medical and disaster data with minimal latency.
- Designed deterministic agentic pipelines with error handling and JSON schema validation to deliver accurate, structured next-step recommendations.
- Applied modular software architecture and REST API design to enable reliable integration across emergency response interfaces.

AQI Prediction System | *Python, Machine Learning, scikit-learn, Data Analysis*

- Developed a machine learning application to forecast Air Quality Index (AQI) levels from environmental sensor data with feature engineering and model selection.
- Delivered actionable insights through data visualization to support environmental monitoring and policy decision-making.

CERTIFICATIONS

Oracle Certified Foundation Associate | *Oracle*

AI Fundamentals with IBM SkillsBuild | *IBM*

CLA: Programming Essentials in C | *C Programming Institute*

Basic Networking for Cisco CCNP Routing and Switching (300-101) | *Cisco*

AI-ML Virtual Internship | *Google*
